600 Gb of production data

“You can take great pride in knowing that wherever you see a Boeing airplane, your efforts at Baan helped building it.”

SPEER to cost even more at Dutch Ministry of Defense

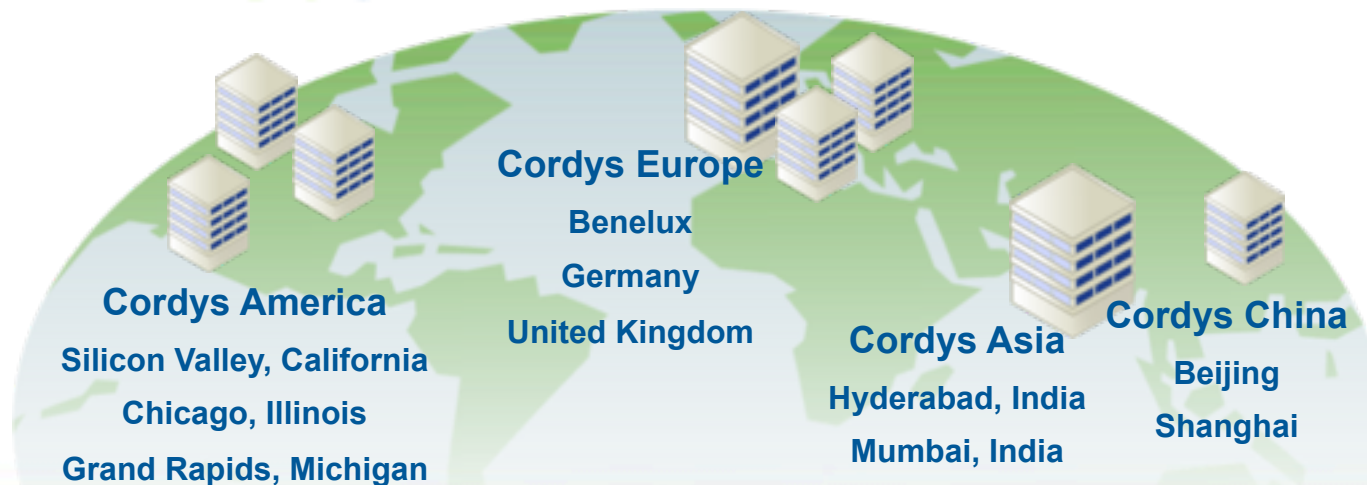

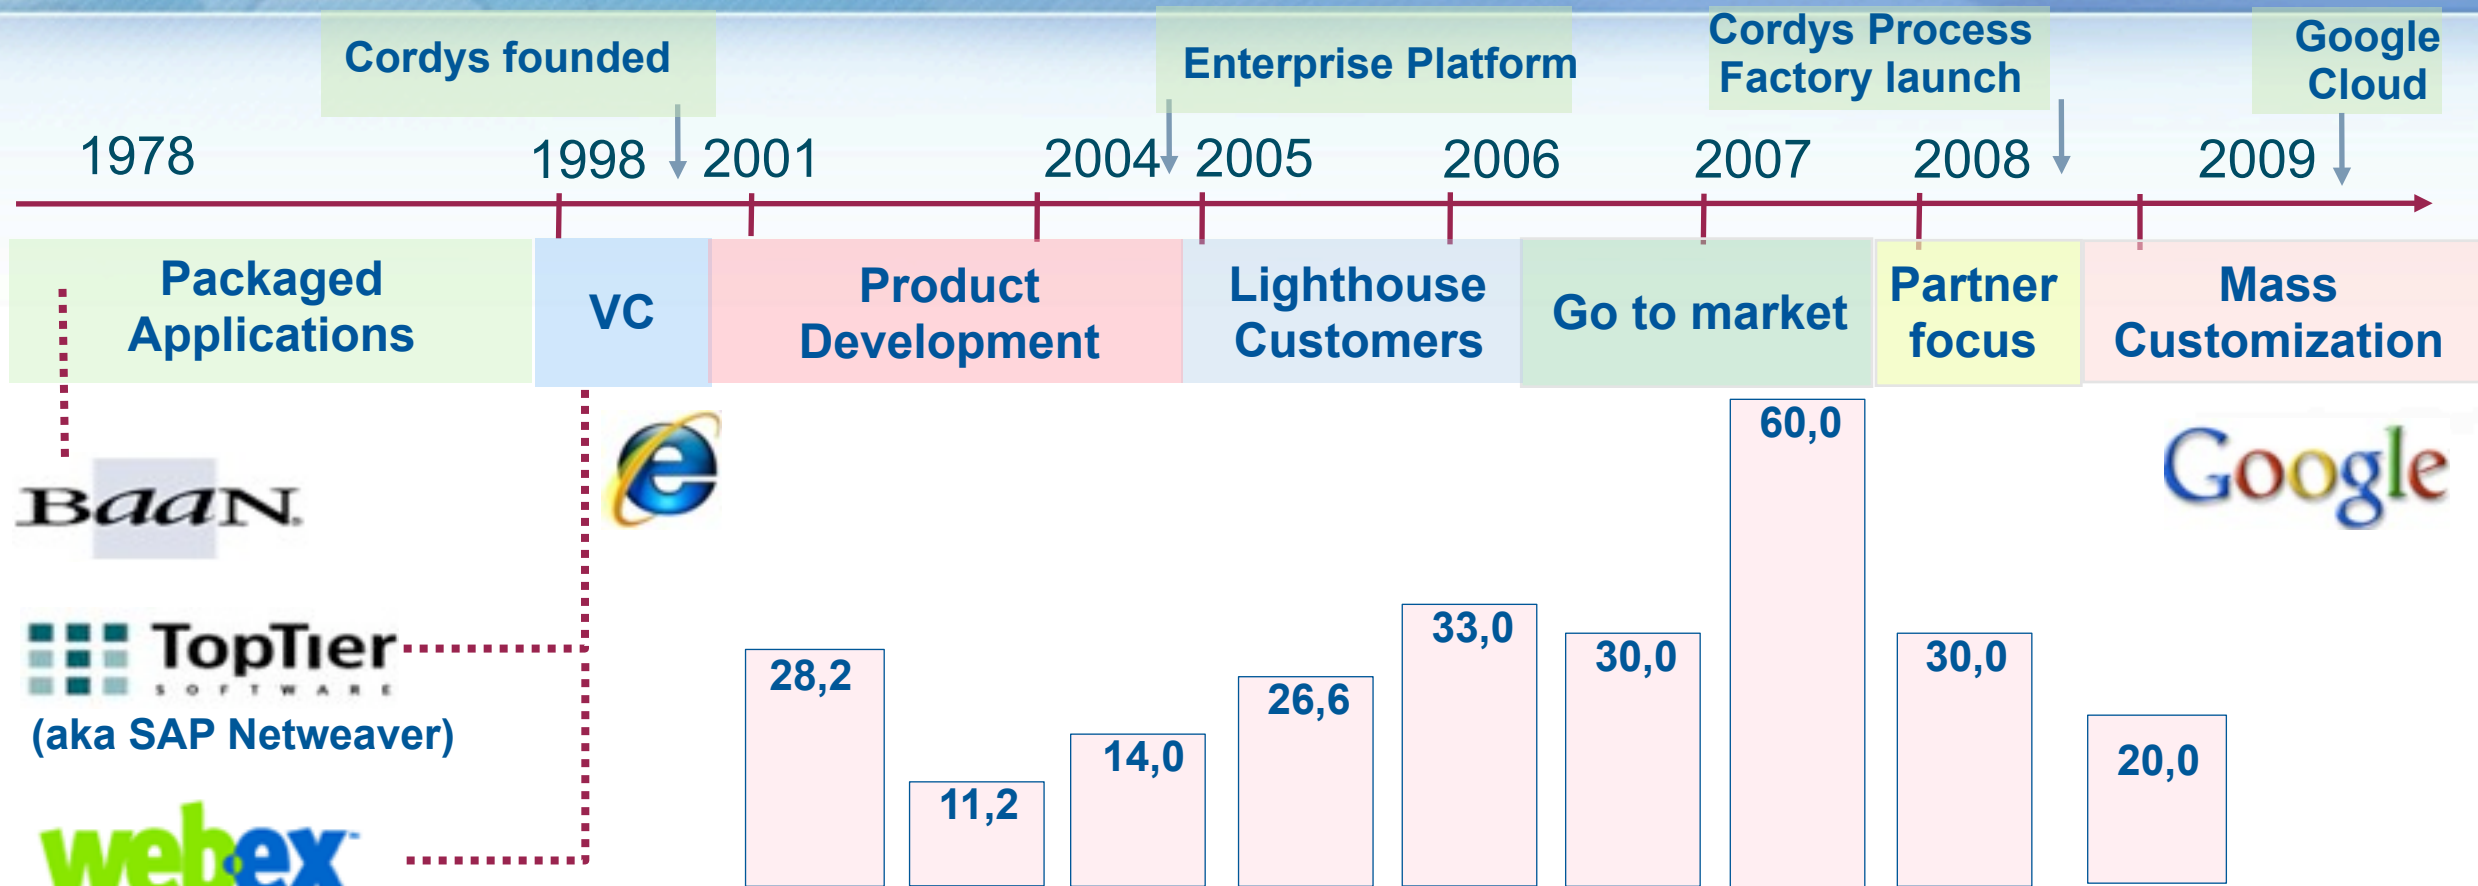

Once again, the predicted costs of the SAP project SPEER at the Dutch Ministry of Defense have risen. The budget has now been increased from € 241 million to € 268.1 million.

In 2004, implementation costs were estimated at € 165 million euros, excluding € 20 million in licensing fees. New setbacks are on the horizon. One potential blow is the simultaneous management of legacy systems and the new SAP applications.

What makes Cordys different

The M&A Solution of our Competitors

- ◆ Disparate product stack
- ◆ Too complex for business users
- ◆ Inefficient and costly
- ◆ Proprietary
- ◆ Uncertain growth options
- ◆ Diverse “plumbing” systems
- ◆ Costly to deploy
- ◆ No distributed design environment
- ◆ No clue about cloud

The One-stack Solution of Cordys

- ◆ One single platform
- ◆ Aligning Business & IT
- ◆ Shortened time-to-value
- ◆ Open standards
- ◆ Scales with your business
- ◆ One Collaborative Workspace
- ◆ Lower Total Cost of Ownership
- ◆ Browser based distributed design
- ◆ Complete multi tenant architecture

Connecting the dots between Enterprise and the Cloud

Business Operations Platform

Nonstop SOA GRID

- ◆ Stateful Object
- ◆ Late Binding
- ◆ Security-SSO
- ◆ Event driven
- ◆ Model Driven Architecture

Advocate for IT professionals. Practitioner actively using social networks to foster collaboration and a sharing of free advisory knowledge. Former CEO and founder of three startups and former SVP of IDC's largest business.

Waves of IT Innovation

Source: Wikibon.org

internet evolution

- Each wave is successively bigger than the previous one -- more users, more spending, and more billionaires.
- The descriptors on the waves could be associated with the leading companies of the era, e.g., IBM Corp. (for mainframes), Wintel (for PCs), Cisco Systems Inc. (for network), and Google (for services).

There's little question in the minds of most observers that Google is driving the next wave. Its software innovation and advertising business model make it a threat to virtually every company in the business -- hardware, software, applications, cloud services... you name it.
